

Attract Newly Rich Regional Neighbors

Make Metro Manila the destination of first choice for the newly emerging affluent citizens of East Asia for shopping, conventions & entertainment

Why? Metro Manila is located in East Asia, the world's largest economy. The rapidly emerging regional middle class will number approximately .75 billion people by 2025. Metro Manila has the potential to attract its rich neighbors for shopping, conventions and meetings, entertainment, attracted by an affordable environment, that needs to be made more friendly, safe and secure.

Reclaim High End Services

Reclaim Metro Manila's role as a leading provider of high-value services like Higher Education, Medical Services, Health/Wellness/Retirement Tourism, and Creative & IT-Based Services in Asia

Why? Metro Manila was a center for high-end services such as higher education, medical care, urban tourism, and creative products such as advertising in the 1960s and early 1970s. This role can feasibly be reclaimed based on the region's geostrategic location, English language skills, large supply of health care professionals, a culture of compassion and friendly service, and a growing cosmopolitan, highly-educated population.

Trends indicate potential for Metro Manila to be an important center of industries such as health, wellness, medical and retirement tourism, education for Asian foreign students (e.g., English, dentistry), entertainment & arts, design & architecture, and creative services, e.g., animation, game/software development and visual/graphic arts.

METRO MANILA'S GREENPRINT: WHY AND WHAT

Metro Manila lacks a strategy and structural plan to serve as a roadmap for the metropolis to excel in the twenty-first century, in terms of livelihood of its citizens, environmental performance, and competitiveness. The overall socio-economic performance of the Philippines has taken a visible upturn of late – documented in the world's media. As the hub and economic engine of the Philippines, Metro Manila can leverage ongoing positive trends further. Metro Manila as a "late mover" in Asia can benefit from the learning of other cities around the world, creating a Greenprint that both motivates and focuses capital, institutions, and human energy to make Metro Manila a much better place to live, do business and visit.

By obtaining support from the groups who actually build a metropolis, such as local governments, the national government, developers, firms (from large corporations to SMEs), and civil society groups, the energies of these stakeholders can be aligned to make the best of limited resources in turning Metro Manila around within 10-15 years. The value of such a collaborative planning / development framework to bring about major change in an urban region quickly has been proven elsewhere, e.g., in California's Silicon Valley, Mexico's Guadalajara metropolis and Brazil's Curitiba.

The Metro Manila Greenprint will advocate key actions in the form of:

- Transport Network (e.g., expressway and rapid transit systems) and catalytic infrastructure (e.g., air and sea port complexes);
- Open Space Systems,
- Urban Center Identification and Roles,
- Neighborhood Identity Enhancement,
- Heritage Protection,
- Growth Vectors/Patterns, etc.,

to guide the creation of a metropolitan platform that will support the efforts of the Region's talented human resources, by reducing inefficiencies, time loss, and socio-economic costs of environmental hazards, providing innovative spaces to do business, enjoyable spaces to relax, and secure places to live.

**METRO MANILA
GREENPRINT 2030**
MY METRO. ONE STORY. OUR HOME.

A structural plan linking all Metro Manila stakeholders through a common goal:

To create a Metro Manila that is inclusive and green - resource and time-conserving, recognizing residents' priorities for livelihood, mobility, and a livable habitat they will nurture, cherish and call truly their own.

THE VISION

Before a Greenprint for Metro Manila can be implemented, stakeholders must undertake a visioning process to identify future key functions of the Metro Manila region, including the locational requirements associated with these functions. The current working vision, developed through workshops and consultations is:

**“METRO MANILA REBORN GREEN, RESILIENT & INCLUSIVE
ASIA'S EASTERN GATEWAY: WHERE SKILLS & FUN INTERSECT
PROCESSING THE WORLD'S KNOWLEDGE, DELIVERING
HIGH-VALUE SERVICES TO THE WORLD WITH A HUMAN TOUCH.”**

VISION COMPONENTS & RATIONALE BUILDING ON METRO MANILA'S STRENGTHS & POTENTIAL FOR GROWTH

Business & Knowledge Process Outsourcing

To be a global center for knowledge processing, based on continuous wide-scale upgrading of human resources.

Why? This is Metro Manila's undisputed area of competitive advantage in an industry with massive growth potential as knowledge creation and processing are globalized.

The Philippines is the number one global provider of voice-based outsourcing and number two in business process outsourcing. The strategy should be one of moving toward higher-value activity through continuous wide-scale upgrading of human resources, with particular emphasis on poor youth, creating ladders of upward mobility. New or upgraded facilities are needed in existing and new locations characterized by mixed use development, 24/7 services, rapid public transport access, and security.

Green City Building

To trigger massive public-private investment that addresses the backlog of housing, mobility, and environmental infrastructure needs, creating a green city building engine of economic growth.

Why? Over one-third of Metro Manila's population lives in substandard accommodation. Most residents and visitors waste hours daily moving about the metropolis, despite mobility being residents' number one concern. Improving environmental conditions, e.g., surface water pollution, solid waste management, air quality, traffic congestion will improve public health, well-being and the attractiveness of the metropolis.

Triggering massive public-private investment that addresses the backlog of housing, mobility, and environmental needs would create a city building engine of economic growth, providing large-scale employment opportunities and a ladder into the middle-class, rivaling business and knowledge process outsourcing in importance.

Capitalize on Metro Manila's Multi-Centered Spatial Structure

Build on the potential of Metro Manila's multi-centered structure to be energy, pollution and time-saving by enhancing connectivity among and within urban centers.

Why? Multi-centered metropolitan structures, characterized by several key urban centers spread across the metropolis, provide greater access to employment and services. Metro Manila's unique multi-centered structure constitutes a framework for the creation of specialized urban centers that will drive economic growth and employment creation. There is a need to enhance mobility by connecting these urban centers in a sustainable way that will reduce pollution, green house gas emissions and energy consumption.

Realize the Potential of the Peri-Urban Area to be a Zone of Upward Mobility

Address the very rapid population growth on the periphery (>3% p.a.) by increasing mobility and livelihood opportunities. Target public policy / investment support to globally competitive employment-creating activities

Why? Peri-urban areas are where the population is growing fastest, new migrants often settle, and are also the preferred location for manufacturing investment. This trend calls for aligning affordable housing with high accessibility to transport and jobs. Peri-urban areas have the potential to become dominant zones of upward mobility in Metro Manila if made accessible to the urban system as a whole, and if a peri-urban investment climate is created conducive to rapid job growth.

Green Retrofit Communities

*Dramatically Upgrade Housing & Communities Emphasizing In-Situ Redevelopment, Neighborhood Focused Design, and
Densification Near Rapid Transit*

Why? Most areas of Metro Manila have a mix of diverse neighborhoods, relatively close to an urban center. Selective, phased in-situ redevelopment, in parallel with improved transport, would create a more efficient, equitable metropolis. Such retrofitting would be characterized by increased densities near rapid transit stations, pronounced specialized high-value urban centers, while preserving the socio-economic mix that exists in and around each node.

Reduce Vulnerability

Build and retrofit Metro Manila to reduce vulnerabilities associated with natural disasters, particularly floods and earthquakes

Why? Metro Manila is one of the most vulnerable metropolitan regions in the world to natural hazards. The occurrence of natural disasters is likely to be made worse by climate change.

There is a need to build and retrofit Metro Manila to reduce natural hazard vulnerabilities by investing in flood control infrastructure, enabling and enforcing risk sensitive land use planning, upgrading and implementing building codes, supporting community adaptation, establishing early warning and emergency response systems, and improving overall disaster management capability.
